## A safe training environment is a clean training environment.

### Is it safe to use FLAIM Trainer & Extinguisher during COVID-19?

Yes, but we recommend you take the correct safety precautions, including:

- Physical distancing of the trainer and the student.
- Proper cleaning of training equipment
- Training in small group sizes

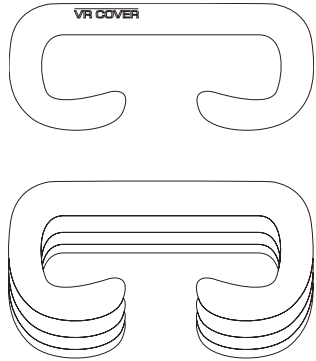

FLAIM Trainer is being used to continue training while group size and proximity restrictions are in place.

### How do I properly clean FLAIM equipment?

The FLAIM Trainer and Extinguisher should be cleaned after every use using anti-bacterial cleaning methods such as alcohol wipes or antibacterial spray. Wipes and spray are not included in these packs and must be purchased by customers themselves.

For improved safety precautions it is also advised to use disposable covers for the headset.

The highest level of protection can be reached using CleanboxTech's UV-C light decontamination box to disinfect headsets.

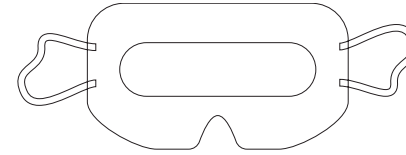

## Hygiene Kit for FLAIM Trainer

### The HTC VivePro Hygiene Cover Kit includes:

- 1 x PU Leather Foam Replacement
